Computer Science graduate (Cum Laude) seeking an entry-level Data Engineering role, with hands-on experience building ETL/ELT pipelines, workflow orchestration, and data-driven applications.

EDUCATION

Caraga State University — Main Campus, Ampayon, Butuan City *July 2026*
Bachelor of Science in Computer Science, Cum Laude

- Department of Science and Technology (DOST) Junior Level Science Scholar, 2024

EXPERIENCE

ML / Computer Vision Intern — Department of Science and Technology *Feb 2026 – Apr 2026*

- Developed a coffee bean defect detection application using YOLO and Python, enabling automated quality inspection for agricultural use
- Built a no-code model training platform allowing non-technical users to train and deploy computer vision models without writing code
- Delivered both tools as part of a government-backed research initiative, working on real-world, production-level projects

QA Tester / Analyst — Department of Science and Technology *Sep 2025 – Oct 2025*

- Manually tested and analyzed multiple web applications under active DOST projects, identifying bugs and usability issues across modules
- Documented test cases, defect reports, and findings to support development teams in improving software quality and reliability

PROJECTS

DPWH Caraga Region Infrastructure Projects Pipeline — Personal Project *Aug 2026 – Present*

- Built an ELT pipeline reconciling two independent public data sources (DPWH official portal, BetterGov transparency portal) on Caraga Region infrastructure project spending, orchestrated with Apache Airflow and loaded into PostgreSQL
- Designed dbt staging and mart models with fuzzy-matching entity resolution and geospatial proximity checks, flagging contracts matching documented procurement fraud patterns
- Containerized the full ingestion-to-warehouse stack with Docker Compose and built an interactive Streamlit + Folium dashboard to visualize unified project data and anomaly flags — live: dataengineeringdpwh13project.streamlit.app, code: github.com/Yoeees/Data_Engineering_DPWH13_Project

Data Engineering Projects — Personal Project *Dec 2025 – Present*

- Built ETL pipelines to ingest, transform, and store data from multiple sources, including weather APIs, taxi datasets, and stock market data
- Automated data workflows using Apache Airflow, enabling scheduled data extraction and processing
- Performed data cleaning and transformation using Pandas to prepare datasets for analysis and downstream tasks

Reinforcement Learning for IoT Anomaly Detection — Undergraduate Thesis *Oct 2025 – 2026*

- Compared four deep reinforcement learning algorithms (DQN, QR-DQN, PPO, Recurrent PPO) with a convolutional autoencoder for semi-supervised anomaly detection in IoT networks
- Recurrent PPO achieved the strongest performance among all algorithms evaluated

Dormitory Login System — Software Engineering Project *Feb 2025 – Mar 2025*

- Led a team of 6 to build a dormitory login system, designing and managing the PostgreSQL database schema and RESTful API integration
- Implemented user authentication, log history tracking, and role-based access control

SKILLS

Languages & Tools: Python, PostgreSQL, Apache Airflow, Databricks, Docker, Kestra, Linux, Vue.js, React
Software: Microsoft Office (Word, Excel, PowerPoint), Google Workspace (Docs, Sheets, Slides), Databricks, Claude
Other: Data analysis & research, written and verbal communication
Spoken Languages: English, Tagalog, Cebuano, Spanish (A2)
