Computer Science graduate seeking an entry-level role in Data Engineering, with hands-on experience building ETL pipelines, computer vision applications, and machine learning research.

EDUCATION

Caraga State University – Main Campus, Ampayon, Butuan City July 2026
Bachelor of Science in Computer Science, Cum Laude

- Department of Science and Technology (DOST) JLSS Scholar, 2024

EXPERIENCE

ML / Computer Vision Intern — Department of Science and Technology Feb 2026 – Apr 2026

- Developed a coffee bean defect detection application using YOLO and Python, enabling automated quality inspection for agricultural use
- Built a no-code model training platform allowing non-technical users to train and deploy computer vision models without writing code
- Delivered both tools as part of a government-backed research initiative, working on real-world, production-level projects

QA Tester / Analyst — Department of Science and Technology Sep 2025 – Oct 2026

- Manually tested and analyzed multiple web applications under active DOST projects, identifying bugs and usability issues across modules
- Documented test cases, defect reports, and findings to support development teams in improving software quality and reliability
- Collaborated cross-functionally with developers and project leads in a government technology environment

PROJECTS

Data Engineering Projects — Personal Project Dec 2025 – Present

- Built ETL pipelines to ingest, transform, and store data from multiple sources, including weather APIs, taxi datasets, and stock market data
- Automated data workflows using Apache Airflow, enabling scheduled data extraction and processing
- Performed data cleaning and transformation using Pandas to prepare datasets for analysis and downstream tasks

Reinforcement Learning on Cybersecurity — Undergraduate Thesis Oct 2025 – 2025

- Semi-Supervised Anomaly Detection in IoT Networks: A Comparative Analysis of Deep Reinforcement Learning Algorithms with Autoencoder-Based Intrinsic Rewards
- Compared various reinforcement learning approaches for detecting IoT-based network attacks

Dormitory Login System — Software Engineering Project Feb 2025 – Mar 2025

- Led a team of 6 in developing a dormitory login system, coordinating frontend, backend, and documentation using Agile/Scrum practices
- Designed and implemented the frontend using Vue.js, creating responsive, user-friendly interfaces for student log tracking
- Developed and managed the PostgreSQL database schema, ensuring efficient storage and retrieval of user login records
- Designed RESTful API integration between frontend and backend for seamless data flow
- Implemented core features including user authentication, log history tracking, and role-based access control

SKILLS

- Languages & Tools: Python, Vue.js, React, Apache Airflow, Docker, Kestra, Linux, PostgreSQL
- Software: Microsoft Office (Word, Excel, PowerPoint), Google Workspace (Docs, Sheets, Slides)
- Other: Data analysis & research, written and verbal communication
- Spoken Languages: English, Tagalog, Cebuano, Spanish (C2)
